(a) Excluding keep whole sensitivities.
(b) Assuming 60% NGL to crude oil price relationship. At crude oil prices outside of our collar range of approximately $80 to $97, this sensitivity decreases by $0.8 million.
(c) Assuming 60% NGL to crude oil price relationship and $90.00/Bbl crude oil price. Generally, this sensitivity changes by $0.8 million for each $10.00/Bbl change in the price of crude oil. As crude oil prices increase from $90.00/Bbl, we become slightly more sensitive to the change in the relationship of NGL prices to crude oil prices. As crude oil prices decrease from $90.00/Bbl, we become less sensitive to the change in the relationship of NGL prices to crude oil prices.

Over 85% of 2012 margins are fee-based or supported by commodity hedges.
